DigiteX Voting Version 2 — Operations & Test Guide

Integrale Plus / DigiteX

Audience: School and university partners testing Voting Priority 1

Date: September 2026

1. What is operational now (Priority 1)

Feature	Status
Electoral cycles containing multiple elections	Operational
Independent open / close / publish results per election	Operational
Eligibility: all students, grades, class sections, departments, manual/import	Operational
Candidates from DigiteX or independent (external)	Operational
Voters from DigiteX sync, manual add, or CSV import	Operational
Student ballot (one submission per election)	Operational
One participation per voter per election	Operational
Ballot secrecy (who voted $\neq$ whom they chose)	Operational
Turnout monitoring + CSV	Operational
Results after close + publish + CSV	Operational
QR/NFC identify + cast API (status aligned to open)	Partial (API only; Priority 2 kiosk UI)
SMS/WhatsApp notifications	Under development (Priority 2)

Standalone Voting-only school product pack	Under development (Priority 2)
--	---------------------------------------

2. Step-by-step (admin)

- Enable module **Voting** or **Elections** for the school.
- Open **Elections** (sidebar) → lands on **Electoral Cycles**.
- **Create Cycle** (e.g. Student Elections 2026).
- Inside the cycle → **Add Election** (e.g. Student President). Repeat for Faculty Representative and Class Delegate with different eligibility.
- Open each election → **Ballot** tab: add positions, then DigiteX or independent candidates.
- **Settings** tab: set eligibility; **Voters** tab → Sync from DigiteX (or import CSV).
- **Open voting** when ready.
- **Turnout** tab: see registered / voted / not voted (names only).
- **Close** → review **Results** → **Publish results**. Export CSV if needed.

3. Step-by-step (student)

- Student logs in → **My Elections**.
- Only elections where they are on the voter roll and status is **Open** appear.
- Select one candidate per position → **Submit ballot** → confirm.
- Receipt confirms **participation only** (choices are anonymous).
- If results were published and visibility is enabled, results appear under Published results.

4. Spec test cases

Test	How to verify
DigiteX reuses students	Sync voters; add candidates by admission number
Independent candidate/voter	Ballot → independent candidate; Voters → external or CSV

Multi-election eligibility	Same cycle: President=all, Delegate=one section; student in that section sees both
No double vote	Submit twice → second attempt rejected
Close one, leave another open	Close President; leave Delegate open
Secrecy	Turnout lists names; Results show counts only — no voter→candidate link

Optional demo seed:

```
php artisan db:seed --class=VotingV2DemoSeeder
```

5. Deploy notes

```
php artisan migrate --force  
php artisan optimize:clear
```

Existing Version 1 elections are wrapped in a migrated cycle; old linked votes are converted to participation + anonymous ballots (`votes_legacy_v1`).

Priority 2 (kiosk UI, notifications, richer exports, standalone packaging) remains planned separately.
