Release Notes — Dashboard, PWA, Subjects & Academic Fixes

Digitex / Integrale Plus — School Admin, Head Officer, Super Admin, QA.

This document covers the **September 2026 follow-up update** (commit `e47f2db` and related work): livelier dashboards, PWA back navigation, attendance schedule grade/section filter, academic sessions DataTables fix, class-course list fix, and **multi-grade central subjects**.

Use it as a release note and a test checklist on staging (**account.digitecvx.com**) before live (**e-digitex.com**).

1. Summary of what changed

Area	What changed
Dashboard cards	KPI cards animate on load, show accent edges, soft icon pulse, and share meters. Attendance block uses metric chips and colour rate badges.
Attendance overview	Same visual system; each KPI shows count plus percent of expected; rate bar under student/staff panels.
PWA back arrow	Header back button on mobile and standalone PWA (not on dashboard). Goes to previous screen or dashboard.
Attendance schedules	Section dropdown only lists sections of the selected grades (e.g. grades 1 and 4 will not show 3A).
Academic sessions	Fixed DataTables Ajax error on Sessions list (<code>sessionTable</code>).

Class courses list	Class dropdown shows all sections (ordered by grade), including inactive ones marked Inactive.
Subjects / Courses	Create a subject once and assign it to many grade levels . Class Courses, timetables, and exams pick subjects for that grade from the shared catalogue.

2. Deploy steps (staging or live)

After pulling `main`:

```
php artisan migrate --force
php artisan optimize:clear
```

Optional if permissions were not seeded recently:

```
php artisan db:seed --class=RolePermissionSeeder --force
```

Clear browser cache or reopen the PWA so header/CSS updates appear.

3. Feature details

3.1 Dashboard and attendance overview

- Shared `dash-*` styles: fade-up entrance, left colour accent, shimmer meters, live rate badges (green / amber / red by threshold).
- School dashboard: enrollment / paid / unpaid / personnel meters; today's attendance chips for students and staff.
- Attendance overview: clickable KPIs still open person lists; meters show share of expected headcount.

3.2 PWA / mobile back arrow

- Appears left of the page title on **mobile** and when the app is installed as **standalone PWA**.

- Hidden on the dashboard home.
- Behaviour: browser history back; if none, go to Dashboard.
- Labels: EN **Back** / FR **Retour**.

3.3 Attendance schedule — section filter

- Select grades first (e.g. 1e and 4e).
- Section overrides only list sections belonging to those grades.
- Server validation rejects sections outside the selected grades.

3.4 Academic sessions list

- Fixed Ajax DataTables warning (invalid order/search on related columns).
- Status labels localized (Active / Planned / Closed and French equivalents).
- Dates shown as `Y-m-d` for stability.

3.5 Class courses — missing classes

- Previously only **active** sections appeared, unordered.
- Now: all institution sections, sorted by grade order then section name.
- Inactive sections still appear with “(Inactive)” / “(Inactif)”.

3.6 Multi-grade subjects (central catalogue)

Problem: Mathematics / French were recreated for every grade.

New workflow:

- Open **Subjects / Cours**.
- Create **Mathematics** once.
- In **Grade levels**, multi-select every grade that teaches it (1e, 2e, 3e...).
- Save.
- Open **Cours par classe**, pick a class (e.g. 1e - A). Mathematics appears if that grade was assigned.
- Enable the subject, set teacher, weekly periods, exam weight as before.

Existing subjects were migrated into a grade pivot automatically. Timetable, exam schedule, assignments, and marks use the same multi-grade lookup.

Note: Each class allocation still keeps its own teacher and periods. The shared subject is only the catalogue entry.

4. Test plan (QA checklist)

A. Dashboard and overview UI

#	Steps	Expected
A1	Log in as School Admin. Open Dashboard.	KPI cards animate in; meters visible under key stats.
A2	Check Today's attendance panel.	Student/staff chips and coloured % badges; progress bars fill.
A3	Open Attendance overview for today.	Hero + KPI meters; rate badge colour matches threshold.
A4	Click Present / Absent / Late KPI.	Detail modal still loads the correct people.
A5	Switch dark mode (optional).	Cards remain readable.

B. PWA / mobile back

#	Steps	Expected
B1	On phone browser or installed PWA, open Students then a student profile.	Back arrow visible in header.
B2	Tap back.	Returns to previous page.
B3	Open Dashboard.	Back arrow hidden.
B4	Desktop wide screen (optional).	Back arrow hidden unless PWA standalone.

C. Attendance schedules filter

#	Steps	Expected
C1	Attendance → Attendance schedules → Create/Edit.	Grade multi-select and section multi-select present.
C2	Select only grades 1e and 4e.	Section list shows only 1e-* and 4e-* sections, not 3e-A.
C3	Change grades; remove a grade that had a section selected.	That section disappears from selection.
C4	Save a valid schedule.	Success; list shows assignments.

D. Academic sessions DataTables

#	Steps	Expected
D1	Open Academics → Sessions.	No DataTables Ajax alert. Table loads rows.
D2	Use Search.	Filters without error.
D3	French locale.	Status shows Active / Planifiée / Clôturée style labels, not raw English crash.

E. Class courses dropdown

#	Steps	Expected
E1	Create or confirm sections for several grades (e.g. 1e–6e).	Sections exist under Class Sections.
E2	Open Cours par classe dropdown.	All those classes appear (searchable), ordered by grade.
E3	If a section is inactive.	Still listed with Inactive marker.

F. Multi-grade subjects

#	Steps	Expected
F1	Subjects → Add subject “Test Math Shared”. Assign grades 5e and 6e. Save.	Created once; list grade column shows both grades.
F2	Cours par classe → select 5e - A.	Test Math Shared appears in the allocation table.
F3	Select 6e - B.	Same subject appears.
F4	Assign teacher + periods on 5e - A and save.	Allocation saved for that class/session only.
F5	Timetable or exam schedule subject picker for 5e.	Shared subject is available.
F6	Edit subject; add grade 4e.	4e classes can now allocate it without recreating the subject.

G. Regression smoke

#	Steps	Expected
G1	Manual student attendance marking.	Still works.
G2	Fee Structures French labels (from prior release).	Annuel / Trimestriel / Tranche still correct.
G3	Attendance device/kiosk punch (if hardware available).	Present/Late still follows attendance schedules.

5. Out of scope

- Automatic merge of old duplicate subjects with the same name across grades (admins can reassign grades on one subject and retire duplicates manually).
- Staff attendance schedules.

- Changing teacher assignment globally when editing the subject catalogue (teachers stay on class-course allocations).
-

6. Support tips for schools

- Prefer **one subject name per school** (Mathematics, French) with multiple grades selected.
 - Use **Cours par classe** for teacher and weekly periods per section.
 - If a class is missing from Cours par classe, check Class Sections exists for that school; inactive classes still appear but are labelled.
 - After deploy, always run **migrate** so the subject-grade pivot table exists.
-

End of release notes.
