WhatsApp Voice IVR Help Manual

Digitex / Integrale Plus — school administrators, Super Admin, and Infobip operators.

This guide answers three questions:

- Is the WhatsApp Voice IVR 100% ready to use?
 - What must you do before parents can call the school WhatsApp number?
 - How do you configure, test, and support the module day to day?
-

1. Is it 100% ready?

The Digitex software is complete. The live calling service is not automatically on.

Digitex already includes:

- Guest and parent keypad menus (French / English)
- Optional 4-digit parent PIN before child data
- Optional spoken AI questions (needs an AI plan)
- Optional transfer to a staff WhatsApp, WebRTC or Viber endpoint
- Settings page, webhook URLs, PIN management, and a recent-calls table

It is **not** ready for parents until all of the following are true:

- Infobip has enabled **WhatsApp Voice / Business Calling** on the school sender
- Infobip routes inbound WhatsApp calls to Digitex CML webhooks (HTTPS)
- Super Admin has enabled the **Voice Iv** module for the school
- The school WhatsApp number is saved in Configuration (same number Infobip uses as the sender)
- The **Enable WhatsApp Voice IVR** switch is on
- A test WhatsApp call appears in **Recent voice sessions**

If **Recent voice sessions** is empty, Digitex has not received a call yet. Saving the settings page alone does not start voice calling.

Honest go-live status

Piece	Status
Digitex menus, PIN, AI, transfer code	Built
School settings UI	Built
Infobip WhatsApp Voice on your sender	External — ask Infobip
Webhook routing in Infobip	You must paste Digitex URLs
Landline / mobile (PSTN) transfer	Not supported (Meta / Infobip rule)
School-initiated outbound WhatsApp calls	Not in this module

2. What parents will hear

A parent opens the school WhatsApp chat and taps **Call** (not a normal phone call). Infobip connects the call to Digitex. Digitex identifies the caller by phone number.

Known parent (number matches a parent record in this school):

Key	Action
1	Fee balance
2	Today's attendance
3	Latest notice
4	Parent-teacher meeting status
5	Switch child
6	More options (pickup, requests, payment details, AI, staff transfer)
8	School contact
9	Change language (EN / FR)
0	Repeat menu
*	Hang up

Unknown caller (guest):

Key	Action
1	Admission information
2	School fees information
3	Contact the school
4	Parent portal help
6	More options (AI and staff transfer if enabled)
9	Change language
0	Repeat
*	Hang up

If PIN is required, Digitex asks for the 4-digit code (then hash) before any child-specific answer. Guests never hear a PIN prompt.

3. Setup checklist (do this in order)

Step 1 — Infobip account (do this first)

Ask Infobip support / your account manager to:

- Enable **WhatsApp Voice / Business Calling** on the school WhatsApp sender
- Confirm DTMF (keypad) is available on WhatsApp Calling for your account
- Confirm a **voice minutes** plan (this is billed separately from WhatsApp text)
- Confirm inbound calls can be forwarded to **Calls API / CML** on a public HTTPS URL

Until Infobip enables Voice on the sender, parents will not reach Digitex, even if every Digitex switch is on.

Step 2 — Digitex Super Admin

- Open **Configuration → Modules** for the school.
- Enable **Voice Ivr**.

- Confirm **Configuration → Infobip** has the same **WhatsApp From** number as the Infobip sender (international digits, for example 243812415004).
- Confirm `APP_URL` in `.env` is the public HTTPS address of Digitex (webhooks will not work on localhost unless you use a tunnel).

Digitex matches the called number (To) against `infobip_whatsapp_from`, `school_whatsapp_number`, or `whatsapp_from`. If that number is blank or belongs to more than one school, the caller hears that voice is not enabled.

Step 3 — School Voice settings

Open **Communication → WhatsApp Voice IVR**.

- Turn **Enable WhatsApp Voice IVR** on.
- Set **Default language** (French or English).
- Optionally write a **Secretary message** (office hours / how to contact the school).
- Click **Save**.

Optional (not required for a first test):

- **Require a voice PIN** — recommended if several families share a phone. Then set a 4-digit PIN per parent using the parent phone number.
- **AI voice agent** — only if the school has an AI plan and an AI provider configured. Otherwise leave it off.
- **Transfer to a person** — WhatsApp, WebRTC or Viber identity only. Do not enter a landline. Leave transfer hours empty to allow transfers at any time.

Step 4 — Paste webhook URLs in Infobip

On the Voice settings page, copy these URLs into Infobip Calls / WhatsApp Voice routing (CML):

Digitex label	When Infobip should call it
Inbound CML	Call starts / is answered
DTMF callback	Parent presses a key
Recording callback	Spoken AI question (only if AI is on)

Transfer callback	After Digitex dials a staff endpoint
Status / hangup	Call ends or fails
Health check	Optional ops ping (GET)

Keep the `?secret=` query if it is shown. Digitex also accepts the chatbot webhook secret / Infobip API key verification used by WhatsApp text.

Open the **Health check** URL in a browser. You should see JSON similar to `"status": "ok"`. If that fails, Infobip cannot reach Digitex either.

Step 5 — Place a test call

- From a parent WhatsApp that is saved on a student in this school, open the school chat.
- Tap **Call**.
- You should hear the school name and the keypad menu.
- Press `1` (fees) or `0` (repeat).
- Refresh **Communication** → **WhatsApp Voice IVR**. A row must appear under **Recent voice sessions**.

If you hear “Voice assistance is not enabled for this school”, check the module, the enable switch, and that the Infobip sender matches the school WhatsApp From number.

4. How to use each setting

Enable WhatsApp Voice IVR

Master switch for this school. The Voice Ivrr module must also be on, or the switch cannot be saved.

Default language

First language of the welcome prompt. Callers can still press `9` to switch between French and English.

Max menu turns

Safety limit so a call cannot loop forever. Default 8 is enough for a normal parent call.

Secretary message

Spoken when the caller needs office contact, or when staff transfer is closed (outside transfer hours).

Privacy / PIN

Turn on if one phone is used by several families. Staff set PINs from the same page:

- Enter the parent phone (same digits as in the student record).
- Enter a 4-digit PIN.
- Click **Set PIN**.

PINs are stored hashed. After 3 wrong attempts the PIN locks for 30 minutes. Removing the PIN from the list means the parent cannot pass the PIN gate until you set a new one.

AI voice agent

The parent presses the AI option, speaks a question, Digitex transcribes it and answers **only** from facts that keypad menus could already give (fees, attendance, notices, and so on). It will not invent marks or look up another child.

Requirements:

- School AI plan is active
- AI provider is configured
- Switch **Enable spoken questions** is on

Leave **Also allow unknown callers** off unless you want guests to use AI on public information only.

Transfer to a person

Connects the WhatsApp call to a **WhatsApp**, **WebRTC** or **Viber** endpoint configured in Infobip.

- **Endpoint identity** for WhatsApp/Viber: staff number in international format
- **WebRTC**: the agent identity from your Infobip WebRTC application
- **Transfers from / until**: office hours. Leave both empty for any time

WhatsApp Calling **cannot** bridge to a PSTN landline or ordinary mobile call. If you need a desk phone, use a WebRTC agent or a staff WhatsApp that can receive the transfer.

5. Day-to-day operations

Confirm the module is working

- **Health check** URL returns `ok`
- **Recent voice sessions** shows new rows after a call
- Session **Profile** is `parent` for known numbers and `guest` otherwise
- **PIN** column shows a check when the parent passed the PIN gate
- **AI** column counts spoken questions on that call

Typical problems

Symptom	What to check
Call never starts / WhatsApp has no Call button	Infobip has not enabled WhatsApp Voice on the sender
Call starts then hangs up immediately	Module off, IVR switch off, or WhatsApp From does not match the called number
Empty Recent voice sessions	Infobip is not posting to Digitex inbound URL, or <code>APP_URL</code> is wrong
Health check fails	Server, HTTPS certificate, or firewall
Parent hears guest menu	Phone on the student/parent record does not match the WhatsApp calling number
PIN always fails	PIN was never set, or you used a different phone than the parent record
AI says it is unavailable	No AI plan / provider, or AI switch is off

Transfer says the office is closed	Transfer hours window, or transfer identity is empty
Transfer never rings	Infobip endpoint type/identity is wrong; PSTN numbers are rejected

6. Security notes

- Treat webhook URLs with `?secret=` as credentials. Do not post them in public tickets.
- Do not require PIN for guests; they only hear public school information.
- AI answers are grounded in the same facts as the keypad. It is not a general chatbot and must not be treated as a counsellor or examiner.
- Voice minutes are billed by Infobip separately from WhatsApp text templates.

7. Quick go-live test (15 minutes)

- Super Admin enables **Voice Ivr** for the school.
- School saves WhatsApp From = Infobip sender.
- School turns **Enable WhatsApp Voice IVR** on and saves.
- Operator pastes inbound + DTMF + status URLs in Infobip.
- Browser opens the health URL — JSON `ok`.
- Parent WhatsApp calls the school number.
- Hear welcome + press `1`.
- Digitex shows a session row.

If step 8 fails, stop and fix Infobip routing before training parents. The Digitex page can be fully configured and still receive zero calls until Infobip Voice is live.
