Release Notes — French UI & Attendance Schedules

Digitex / Integrale Plus — School Admin, Head Officer, Super Admin, QA.

This document describes the **September 2026 update**: French localization fixes for finance and DataTables, fee grade section display, and **attendance schedules by level/section**. Use it as a release note and a test checklist before production.

1. Summary of what was built

Area	What changed					
French UI	DataTables Search / Show entries / pagination use locale (<code>pagination.*</code>). Fee frequency and payment mode no longer show raw English enums.					
Fee list — Niveau scolaire	Grade-wide fees show a compact section range (e.g. <code>1e A-E</code>) instead of only <code>1e (Toutes les sections)</code> .					
Attendance schedules	Named check-in / check-out / late-margin schedules assignable to grade levels and optionally class sections . Device/kiosk punches use the student's class schedule for Present / Late.					
Permissions	New module permissions: <code>`attendance_schedule.view</code>	create	update	delete	viewAny	deleteAny`.
Docs	This release note PDF.					

2. French UI localization (finance & tables)

Problem

Francophone schools saw English in French locale: `Search`, `Show entries`, `yearly`, `termly`, `Installment (1)`, and fee grade labels that did not show which sections a fee covered.

Fixes

- Global DataTables language defaults from `resources/views/layout/footer.blade.php` using `__('pagination.*')`.
- Helpers: `finance_frequency_label()`, `finance_payment_mode_label()`, `finance_fee_grade_label()`, `compact_section_name_range()`.
- Wired into Fee Structures list, invoices fee picker, student finance views, class summary report.
- New / updated EN+FR keys (`finance`, `parent`, `student`, `pagination` consumers).
- Cursor rule: `.cursor/rules/french-ui-localization.mdc`.

Display examples (locale = `fr`)

Stored value	Shown as
<code>yearly</code>	Annuel
<code>termly</code>	Trimestriel
<code>installment</code> + order 1	Tranche 1
Grade <code>1e</code> , sections A-E, no <code>class_section_id</code>	<code>1e A-E</code>
Grade <code>1e</code> , sections A,B,D	<code>1e A-B, D</code>
Single section A	<code>1e A</code>
Grade with no sections	<code>1e (Toutes les sections)</code>

3. Attendance schedules by level / section

Problem

One institution-wide `school_start_time` / `late_margin_time` cannot support:

- Kindergarten: 07:45–11:30
- Primary: 07:15–12:15
- Secondary: 12:30–17:30

Afternoon secondary students were often judged against a morning school start.

Solution

- Create named **Attendance schedules** (check-in, optional check-out, late margin).
- Assign to **grade levels** (e.g. all Primary grades) and/or **class sections** (e.g. PM shift override).
- On device or kiosk punch, Digitex loads the student's enrollment class, resolves the schedule, then marks Present or Late.

Resolution order

- Schedule assigned to the **class section**
- Else schedule assigned to the section's **grade level**
- Else **Configuration** default (`school_start_time` + `late_margin_time`)

Punch behaviour (students)

Institution type	Status logic
Primary / secondary (day gate)	Always vs schedule check-in + late margin (timetable periods ignored for day Present/Late).
University / vocational (subject-wise)	Inside a timetable period: Present/Late vs period start + schedule late margin. Before any period: schedule check-in.

- Check-out remains the second punch after `double_tap_wait_time`.

- Staff attendance still uses institution school start (staff schedules are out of scope for this release).

Menu & setup

- Sidebar: **Attendance** → **Attendance schedules** / **Horaires de présence**
- Configuration → School Year timings remains the **fallback** and still controls staff / hardware defaults.
- After deploy: run migrations and ensure `RolePermissionSeeder` (or equivalent) has created `attendance_schedule.*` permissions for School Admin.

Database

- `attendance_schedules`
- `attendance_schedule_assignments` (exactly one of `grade_level_id` or `class_section_id` per row)

Key code paths

- `app/Services/Attendance/AttendanceScheduleResolver.php`
- `app/Services/Attendance/AttendanceGateStatusService.php`
- `app/Http/Controllers/Api/V1/AttendanceApiController.php` (kiosk reuses this API)
- `app/Http/Controllers/AttendanceScheduleController.php`

4. Deploy steps

- Pull this release on the server.
- Run:

```
php artisan migrate --force
php artisan db:seed --class=RolePermissionSeeder --force
php artisan optimize:clear
```

- Confirm School Admin can open **Attendance** → **Attendance schedules**.
- Configure schedules for Kindergarten / Primary / Secondary (or your grade names), then assign grades (and section overrides if needed).

- Switch UI locale to French and spot-check Fee Structures + Attendance.

5. Test plan (QA checklist)

A. French UI — Fee Structures

#	Steps	Expected
A1	Set locale to French. Open Fee Structures list.	DataTables: Rechercher, Afficher _ entrées, pagination in French (not Search / Show entries).
A2	Fee with frequency <code>yearly</code> .	Cell shows Annuel , not <code>yearly</code> .
A3	Fee with frequency <code>termly</code> .	Cell shows Trimestriel , not <code>termly</code> .
A4	Installment fee order 1.	Tranche 1 , not <code>Installment (1)</code> .
A5	Grade-wide fee for <code>1e</code> with sections A-E active.	Niveau scolaire ≈ 1e A-E , not only Toutes les sections.
A6	Fee for a single section.	Compact label such as 1e A .
A7	Switch locale to English.	Labels become Yearly / Termly / Installment 1 / <code>1e A-E</code> .

B. Attendance schedules — admin UI

#	Steps	Expected
B1	Open Attendance → Attendance schedules.	Index loads; Create button available for School Admin.
B2	Create “Primary morning”: check-in 07:15, check-out 12:15, late margin 10; assign Primary grade(s).	Saved; list shows times and assigned grades.
B3	Create “Secondary afternoon”: check-in 12:30, check-out 17:30, late margin 5; assign Secondary grade(s).	Saved.
B4	Create “Primary PM” with section override only (one PM section).	That section uses 13:00 (example); other Primary sections still use grade schedule.

B5	Leave one grade unassigned.	Students in that grade use Configuration school start + late margin.
B6	Deactivate a schedule.	Assigned classes fall through to next rule (grade or institution).
B7	French locale on schedule screens.	Titles and labels in French (Horaires de présence, etc.).

C. Device / kiosk Present & Late

Use a test student enrolled in each class. Punch via kiosk or hardware API.

#	Scenario	Expected status
C1	Primary schedule 07:15 + margin 10; punch 07:20.	present
C2	Same student; punch 07:30.	late
C3	Secondary schedule 12:30 + margin 5; punch 12:32.	present (must not be late vs 08:00 school default)
C4	Same secondary student; punch 12:40.	late
C5	Section override 13:00; punch 13:00.	present
C6	Second punch after cooldown.	Check-out set; status unchanged.
C7	Staff punch.	Still uses institution school start (unchanged).

D. Regression

#	Steps	Expected
D1	Manual class attendance marking.	Still works; teacher chooses status.
D2	Subject-wise (university) school: punch during a period.	Present/Late vs period start; subject may attach.
D3	Invoice fee picker / student fees display in French.	No raw <code>yearly</code> / <code>installment</code> in UI.

6. Out of scope (this release)

- Staff attendance schedules
 - Auto half-day / early leave from check-out time
 - Day-of-week variants on one schedule
 - Assigning by education cycle enum alone (use grade levels)
-

7. Support tips for schools

- Name schedules clearly: e.g. **Maternelle matin, Primaire, Secondaire après-midi**.
 - Prefer assigning **grades** first; use **section overrides** only for AM/PM splits inside the same grade.
 - Keep Configuration school hours as a sensible default for unassigned classes and for staff.
 - After changing schedules, test one student punch per level before opening the gate for the day.
-

End of release notes.
